AllBio SuperTrans Reagent (non-liposomal polymer)

Cat. No. ABTGAFT201

Storage: at 2-8°C for one year

Description

AllBio SuperTrans Reagent is a non-liposomal formulation designed to transfect DNA and RNA into a wide variety of eukaryotic cell lines with high efficiency and low toxicity. Primary cells and other difficult-to-transfect cells can also be effectively transfected by this reagent.

- High efficiency
- Low cytotoxicity
- Transfect DNA and RNA
- Can be used in the presence of serum and antibiotics

AllBio SuperTrans Reagent (non-liposomal polymer)

siRNA Transfection

Cells should be 50-70% confluency at the time of transfection. For 24-well plate, use 50 pmol of siRNA and 2 μ l of AllBio SuperTrans Reagent. The experimental procedure is the same as DNA transfection described above.

Optimization of plasmid DNA and siRNA transfection

In order to achieve optimal combination of high transfection efficiency and low cytotoxicity, the ratio of DNA or siRNA to AllBio SuperTrans Reagent as well as the initial cell density for transfection could be optimized. Please refer to the table below as recommendation.

Amount of culture medium, nucleic acid and AllBio SuperTrans Reagent in transfection of different cell culture plates
